INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.

PCT/GB 03/03450

I. Basis of	f the	report
-------------	-------	--------

1. With regard to the **elements** of the international application (Replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report since they do not contain amendments (Rules 70.16 and 70.17)):

	Des	scription, Pages				
	1-4		as originally filed			
	Cla	ims, Numbers				
	1-3		filed with telefax on 07.09.2004			
	Dra	wings, Sheets				
	1/5-	5/5	as originally filed			
2.	With lang	With regard to the language , all the elements marked above were available or furnished to this Authority in language in which the international application was filed, unless otherwise indicated under this item.				
	The	ese elements were av	ailable or furnished to this Authority in the following language: , which is:			
		the language of a tra	anslation furnished for the purposes of the international search (under Rule 23.1(b)).			
			lication of the international application (under Rule 48.3(b)).			
		the language of a tra Rule 55.2 and/or 55.	anslation furnished for the purposes of international preliminary examination (under 3).			
3.	Witl inte	n regard to any nucle rnational preliminary	eotide and/or amino acid sequence disclosed in the international application, the examination was carried out on the basis of the sequence listing:			
		contained in the inte	rnational application in written form.			
		filed together with th	e international application in computer readable form.			
		furnished subsequer	ntly to this Authority in written form.			
		furnished subsequer	ntly to this Authority in computer readable form.			
		The statement that to in the international a	he subsequently furnished written sequence listing does not go beyond the disclosure pplication as filed has been furnished.			
		The statement that the listing has been furnitude.	he information recorded in computer readable form is identical to the written sequence ished.			
4.	The	amendments have re	esulted in the cancellation of:			
		the description,	pages:			
		the claims,	Nos.:			
		the drawings,	sheets:

5. 🗆	This report has been established as if (some of) the amendments had not been made, since they have
	been considered to go beyond the disclosure as filed (Rule 70.2(c)).

(Any replacement sheet containing such amendments must be referred to under item 1 and annexed to this report.)

6. Additional observations, if necessary:

V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N) Yes: Claims 3

No: Claims 1,2

Inventive step (IS) Yes: Claims

No: Claims 1-3

Industrial applicability (IA) Yes: Claims 1-3

No: Claims

2. Citations and explanations

see separate sheet

INTERNATIONAL PRELIMINARY **EXAMINATION REPORT - SEPARATE SHEET**

Re Item V

Reasoned statement with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

Reference is made to the following documents:

D1: US-A-5 641 095 (DE LAFORCADE VINCENT) 24 June 1997 (1997-06-24)

D2: EP-A-0 341 636 (JOHNSON & SON INC S C) 15 November 1989 (1989-11-15)

1a)

The present application does not meet the criteria of Article 33(1) PCT, because the subject-matter of claim 1 is not new in the sense of Article 33(2) PCT.

The document D1 discloses (the references in parentheses applying to this document): an overcap for an aerosol container (8) consisting of a wall (11) capable of being attached to the container, a button (1, 2) having an actuating means (18) and a cavity (5) in the bottom thereof adapted to sealingly receive the free end of an aerosol valve stem (7) having a hollow bore which is in flow communication with an orifice (4) in the top of said body for releasing a pressurized liquid to be atomized, said orifice being coaxial with the central long axis of said cavity and bore, and a hinge (10) attaching the button to the wall, such that the configuration of the hinge causes the liquid escaping from the orifice to be dispensed along the central axis of the cavity as it is atomized into an aerosol spray pattern, whereby the wall provides the sole means for attaching the overcap to the container.

1b) Dependent claim 2 does not contain any features which, in combination with the features of the claim to which it refers, meet the requirements of the PCT in respect of novelty and inventive step, see document D1.

2) The present application does not meet the criteria of Article 33(1) PCT, because the subject-matter of claim 3 does not involve an inventive step in the sense of Article 33(3) PCT.

The overcap that is described in claim 3 as the product of a set of dies, is known from

INTERNATIONAL PRELIMINARY

EXAMINATION REPORT - SEPARATE SHEET

the prior art (see D1).

Using a set of dies to manufacture (any kind of) plastic overcaps, comes within the scope of the customary practice followed by persons skilled in the art, this is illustrated in D2. Consequently, the subject-matter of claim 3 lacks an inventive step.

- An overcap for an aerosol container comprising a wall capable of being attached to the container, a button having an actuating means and a cavity in the bottom thereof adapted to sealingly receive the free end of an aerosol valve stem having a hollow bore which is in flow communication with an orifice in the top of said body for releasing a pressurized liquid to be atomized, said orifice being coaxial with the central long axis of said cavity and bore, and a hinge attaching the button to the wall, such that the configuration of the hinge causes the liquid escaping from the orifice to be dispensed along the central long axis of the cavity as it is atomized into an aerosol spray pattern.
 - 2. The overcap of claim 1 wherein the hinge is a torsion hinge.
- 3. An overcap for an aerosol container comprising a wall capable of being attached to the container, a button having an actuating means and a cavity in the bottom thereof adapted to sealingly receive the free end of an aerosol valve stem having a hollow bore which is in flow communication with an orifice in the top of said body for releasing a pressurized liquid to be atomized, said orifice being coaxial with the central long axis of said cavity and bore, and a torsion hinge attaching the button to the wall, such that the configuration of the torsion hinge causes the liquid escaping from the orifice to be dispensed along the central long axis of the cavity as it is atomized into an aerosol spray pattern.
